Course 2 Glossary

AWS Generative AI Applications on AWS:

AWS Services for AI Solutions on AWS

AI Agent

A generative AI-powered system that can reason, make decisions, and take actions to complete multi-step tasks based on natural language instructions.

Amazon Bedrock

An AWS service that offers a simple and flexible platform for building generative AI applications using foundational models through APIs.

Amazon Comprehend

A natural language processing (NLP) service by AWS used for text analysis such as sentiment analysis, entity recognition, and topic modeling.

Amazon EMR

A cloud-native big data platform for processing vast amounts of data using open-source tools like Apache Spark and Hadoop.

Amazon Kendra

A highly accurate enterprise search service powered by machine learning that enables organizations to extract information from unstructured data.

Amazon Lex

A service for building conversational interfaces using voice and text. It powers Amazon Alexa and can be used for chatbots or virtual assistants.

Amazon Polly

A service that converts text into lifelike speech using deep learning technologies.

Amazon Rekognition

An image and video analysis service by AWS that can identify objects, scenes, activities, and facial features for content moderation, security, and more.

Amazon SageMaker AI

A fully managed service that allows developers and data scientists to build, train, and deploy machine learning models at scale.

Course 2 Glossary

AWS Generative AI Applications on AWS:

AWS Services for AI Solutions on AWS

Amazon Textract

An AI-powered document analysis service by AWS that automatically extracts text, forms, and tables from scanned documents.

Amazon Q

A service that provides generative AI capabilities for various job functions, such as code generation, document generation, virtual assistants, and workflow automation.

Amazon Q Business

A generative AI assistant for businesses that integrates with corporate knowledge to automate tasks like document generation, customer service, and data analysis.

Amazon Q Developer

A version of Amazon Q tailored for software developers to enhance productivity through AI-powered coding assistance, debugging, and application development.

AWS Batch

A service that enables developers to run batch computing workloads on AWS, simplifying the management of computing resources for large-scale processing.

AWS Free Tier

A limited, no-cost access to participating AWS services for new customers so you can explore, build, and learn.

AWS Glue

A fully managed ETL (extract, transform, load) service by AWS that facilitates data preparation and integration for analytics.

AWS Lambda

A compute service that runs code in response to events without provisioning or managing servers, ideal for serverless applications.

Custom AI Model

A model specifically built and trained using your proprietary data (documents, text, and images) and tailored to your goals.

Course 2 Glossary

AWS Generative AI Applications on AWS:

AWS Services for AI Solutions on AWS

Data Governance

The practice of managing data availability, usability, integrity, and security within an organization.

Data Lifecycle

The stages through which data passes, including collection, storage, processing, analysis, and deletion.

Generative AI

A type of AI that focuses on creating new content such as text, images, or other media, rather than analyzing or classifying existing data.

Latency

The time delay between an input being received and the desired output being produced by an AI model or system.

Model Customization

The process of providing additional training data to a pre-trained model to improve its performance for specific use-cases.

Model Distillation

A process of simplifying and optimizing large AI models by creating smaller, more efficient versions that retain the original model's performance.

Parameter Tuning

The process of adjusting the settings of an AI model to improve its performance, such as temperature, top-k, top-p, and response length.

Prompt Engineering

The practice of designing effective inputs (prompts) to guide an AI model in generating desired outputs.

Security and Privacy

The protection of sensitive data and systems from unauthorized access, modification, or destruction, especially in AI systems.
